

Who we are?

We are a group of like-minded people from Lithuania, who started the first cooperative activity in the Baltic states to grow and provide crickets as food for human consumption and feed for animals around the world.

Canned Crickets

When it comes to animal feed, most people tend to avoid raising insects as livestock, because they are noisy, have a specific smell and require additional care. We offer a great substitute to live feeding – canned crickets. Properly raised, fed and canned – crickets offer very similar nutritional benefits to their live counterparts. Why? Because our product is 100% pure cricket without any additives. Nutritional information of canned and live crickets is highly comparable. Our canned feed has various application methods. It can be used as a primary feed, as backup when live feed is not available, or as an addition to other feed with the purpose of enriching the supplemental variety for your pet's diet.

About this item:

- **Moist and nutritious meal**
- **Stacked with essential nutrients and vitamins**
- **May be fed daily**
- **Satisfies all nutritional needs**
